Title – Sr. Project Manager

Technology Role:

Span of Control: One GL should manage max 60-70 persons and maximum four projects.

Technology: Identify suitable technology for the project.

Projects

Overall responsibility for projects. (Exceptions are possible on case-to-case basis)

- Will monitor projects and support them
- Will ensure timely delivery of projects
- Will ensure quality of delivery of projects
- Will ensure that projects are managed within the approved budgets.

Project management

- Will appoint and finalize team in consultation with VP.
- Approve project plan and monitor Project(s) accordingly.
- Review and participate in PMO activities. Highlight any problem to top management and follow up on action items generated.
- Represent the project status in PMO meeting and escalate any issues/risks
- Generate monthly report about the project to the top management.
- Ensure that the software systems, products and services meet the stated and implied needs of the customer.
- Manage any user documentation that is required for the project.
- Responsible for Requirements/Design reviews.
- Responsible for process compliance of the project.

Team management

- All project team related KRAs defined could be further customized for the project needs and should be handed over to all team members including PM's to Developers. KRAs agreed upon for all levels would be available to all the team members. Copy of this KRA set will be given to HR.
- Make sure that all levels within the assigned projects are adhering to their KRAs. Any deviations should be noted, notified to respective parties and agreed upon.
- Manage People/Resource Allocation.
- Ensure that adequate resources (human, material etc.) are provided for the project.
- Ensure timely performance reviews for the projects he/she is responsible for.
- Identify training requirements.

Information management

- Effective communication channels with all related groups.

CONFIDENTIAL

- Coordination between various support groups, R&D, HR, Accounts, NY team (including marketing), testing, documentation and any new group that is formed.

Quality and Process

All SEPG/SQA/CMM related activities management, coordination, and review.

HR

- Contribute effectively to complete Performance Management cycle.
- Coordinate and select Interview panel. This responsibility will be on a monthly rotation basis between GL's. Can also nominate additional members for specific interviews if they are not on the Interview Panel.
- Will approve leave for PM's reporting to him/her.

Business Promotion

- Any other assignment that the management decides over a period of time.
- Conceptualize & manage in-house projects/products.
- Help in estimation for the potential new projects. Participate in building proposals.

RL – 9/10

Project Manager

Roles and Responsibilities:

Technology: Help GL to identify suitable technology for the project.

Projects:

- All project related KRAs would be applicable to only assigned projects.
- Project Tracking (Project Planning, Resource-Task Allocation management)
- Timely Internal Project Delivery Responsibility (to PM-US)
- Project Estimation (Internal Delivery to PM-US)
- Reviews of Requirements/Design/Code/DB/Test cases etc. He/she will not been responsible for any coding. Coding may be done for any important piece of code if required. Responsible to make sure code reviews are done.
- Will be primarily responsible for quality of the project.
- Will be responsible for Day-to-day activities including team management and communication with related personnel.
- Allocation of all tasks, regardless of location
- Periodic information (related to the project) to related personnel, based on the mutually decided protocol between PM, GL and such personnel. This will be raw/finished information based on the agreement.
- Update PMO
- Flow of information within team
- All CMM related activities except PSR

CONFIDENTIAL

- He/She will conduct weekly team meetings to share plans /update the project status to everyone in the team. This meeting will also involve GL.
- All team members including support group members will report to PM.
- Resolve technical issues between project team and customer.
- Project Initiation and wind up.
- Prepare the test data for the testing team.
- Conduct formal status review with client on monthly basis.

Quality and Process

- Review of SQA activities on both a periodic and event-driven basis
- Plan and Participate in Review and Audits
- Ensuring Configuration Control on all documents, products, data, and records as provided for in Aithent's Quality Management System and in the SCM Plan.

HR

- Ensure timely performance reviews for the project he/she is responsible for.
- PM-ND will help GL in reviewing support group members allocated to the project.
- Will approve leave for a team member and will inform GL and related personnel.

Information management

- Maintain Project Logbook. This should be transparent to GL. GL can also update Project Logbook. This logbook will be for internal events.
- Team Communication
- Inform related personnel of his/ her own leave /unavailability.

RL – 6/7/8

Module Leader

Responsibilities

Technology: He/She will help PM to identify suitable technology for the project.

Projects:

- All Module related KRAs would be applicable to only assigned Modules.
- Module Tracking (Module Planning, Resource-Task Allocation management)
- Timely Internal Module Delivery Responsibility (to PM)
- Module Estimation (Internal Delivery to PM)
- Reviews of Requirements/Design/Code/DB/Test cases etc. He/She will not be responsible for any coding. Coding may be done for any important piece of code if required. Responsible to make sure code reviews are done.
- Will be primarily responsible for quality of the Module.
- Will be responsible for Day-to-day activities including team management and communication with related personnel.
- Allocation of all tasks, regardless of location.

CONFIDENTIAL

- Periodic information (related to the Module) to related personnel, based on the mutually decided protocol between PM, GL and such personnel. This will be raw/finished information based on the agreement.
- Flow of information within team.
- All applicable CMM related activities
- He/she will conduct weekly team meetings to share plans /update the Module status to everyone in the team. This meeting will also involve GL.
- All team members including support group members will report to PM.
- Resolve technical issues between Module team and customer.
- Module Initiation and wind up.

Project Management

- Will help PM in Project Tracking (Project Planning, Resource-Task Allocation management)
- Internal Project Delivery Responsibility for the specific module(s) (to PM)
- Peer Reviews of Requirements/Design/Code/DB/Test cases etc. He/She will be responsible for coding and managing all aspects of the module development. He/She will be responsible for ensuring design compliance, code reviews and unit level testing for all the developer allocated to his/her module(s).
- Provide technical assistance and guidance to the team
- Help in Design effort
- Coordination and Integration of all developed units.
- Prepare installable & release to testing team. Prepare Release Note.
- Perform impact analysis for any proposed change.

Team management

- Support group (DBA, TWG, Testing, SQA) team members will report to ML according to assignment by PM.
- Information management
- Flow of information within module team. Coordination of information flow will be done with the help of PM.
- Will ensure sufficient documentation for all modules such that knowledge transfer is easily possible in the event of a resource reassignment.
- Will report to PM regardless of location.

Quality and Process

- Support PM in CMM related activities.
- Will be responsible for defect prevention.
- Ensure regular Backups
- Participation in Reviews and Audits
- Participate in defect prevention activities.

HR- Help PM in ensuring timely performance reviews for the project he/she is responsible for.

CONFIDENTIAL

RL – 4/5

Senior Developer

Responsibilities

Technology

- Competence in the desired/specific technology for the project
- Recommend implementation approach for module in the project.
- Identify alternative solutions to specific issues and technology constraints.
- Any R&D/Process related task allocated by ML or PM

Projects

- Will be responsible for:
- Design analysis of assigned units
- Coding following coding standards agreed upon for the project.
- Conducting peer code reviews and self-code review
- Self-testing
- Validate correct implementation of requirements
- Repair defects as indicated by various quarters
- Review the test cases for the units assigned
- Will report to ML. PM will assign task to Developer after consulting ML.
- Participate in defect prevention activities.

Quality and Process

Any process implementation task assigned by ML/PM

HR

- Share knowledge and competence to train and guide other project team members
- ML will approve Sr Developer's leave after approval from PM

Configuration Controller

Developer can also be a configuration controller. In this case following responsibilities will also be added to the profile.

Responsibilities

Projects

- Configuration Controller will control the base lining of configurable items within a project.
- Identify and maintain Configurable items.
- Maintain Libraries (any in-house or third-party software) used in the project.
- Perform configuration audits and submit report to project manager
- Schedule and follow VSS backups. Maintain backup log.

CONFIDENTIAL

- Maintain user privileges as per PM's directions.
- Will report to Project manager

IT

IT Manager

Responsibilities

- Track and maintain hardware and software inventory Manage information technology and computer systems
- Ensure security of data, network access and backup systems
- Train employees on both software and hardware, troubleshoot, and provide technical support when needed
- Develop and execute disaster procedures, and maintain data backups Plan, organize, control and evaluate IT and electronic data operations Identify problematic areas and implement strategic solutions in time Audit systems and assess their outcomes
- Preserve assets, information security and control structures Handle annual budget and ensure cost effectiveness
- Responsible for Information security training
- Responsible for responding to client questionnaires on IT and Information Security

IT Engineer

- Manage information technology and computer system
- Ensure security of data, network access and backup systems
- Identify problematic areas and implement strategic solutions in time Configure computer systems printers, telephones and solve issues regarding them
- Troubleshoot technical issues regarding any IT equipment such as printers, desktops, laptops, tablets or any network related issue.
- Proper documentation of the issues is done so that any other IT staff could read the problem and understand the solution.
- Test the latest technologies.
